

Selamat untuk sideload dari sumber rasmi.

Ringkasan berdasarkan semakan kod, app bundle, polisi privasi, codesign lokal dan polisi Apple. Ini bukan audit forensik penuh.

VERDICT KESELAMATAN

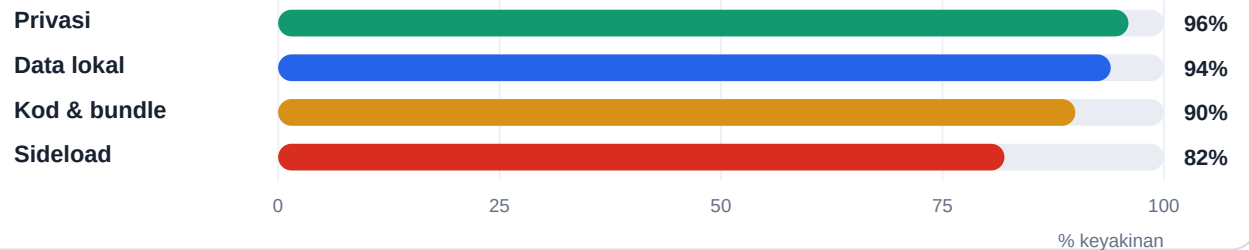

Selamat untuk sideload

Skor 90% untuk build rasmi. Bukan 100% kerana app belum notarized dan masih bergantung pada binary vendor seperti yt-dlp, FFmpeg dan Deno.

APA YANG DISEMAK

Tahap keyakinan mengikut semakan

EVIDENCE RINGKAS

Perkara	Dapatan	Maksud
Rangkaian	Hanya bila pengguna tampal link atau kemas kini enjin.	Tiada server pembangun untuk aktiviti muat turun.
Cookies	Tidak aktif secara lalai; pilihan untuk video perlu login.	Keychain prompt ialah normal jika dihidupkan.
Storan	Sejarah, nota dan media disimpan lokal.	Padam sejarah untuk bersihkan URL/path lokal.
Bundle	Bundle sah pada disk; Gatekeeper tolak kerana belum notarized.	Isu distribusi, bukan bukti malware.

KENAPA BUKAN APP STORE?

Musim sukar masuk Mac App Store kerana fungsi utamanya ialah simpan, tukar format dan muat turun media pihak ketiga. Apple App Review Guideline 5.2.3 memerlukan kebenaran jelas daripada sumber seperti YouTube, SoundCloud atau Vimeo.

CARA PASANG SELAMAT

- DMG rasmi**
Elak reupload
- Semak hash**

- Right-click Open**
Gatekeeper normal

Keputusan: selamat untuk sideload dari sumber rasmi. Gunakan Musim hanya untuk kandungan yang anda berhak simpan.

Safe to sideload from the official source.

Summary based on code review, app bundle checks, privacy policy, local codesign verification and Apple policy. This is not a full forensic audit.

SAFETY VERDICT

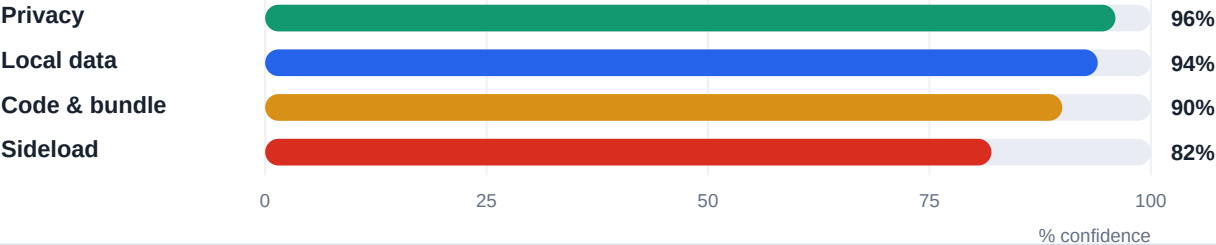

Safe to sideload

90% confidence for the official build. Not 100% because the app is not notarized and still depends on vendor binaries such as yt-dlp, FFmpeg and Deno.

WHAT WAS CHECKED

Confidence by review area

EVIDENCE SUMMARY

Item	Finding	Readout
Network	Only when a user pastes a link or updates the engine.	No developer server receives download activity.
Cookies	Off by default and optional for login-required videos.	Keychain prompt is normal when enabled.
Storage	History, notes and media are stored locally.	Clear history to remove local URLs/paths.
Build	Bundle verifies on disk; Gatekeeper rejects because it is not notarized.	Distribution issue, not malware evidence.

WHY NOT THE APP STORE?

Musim is difficult to place on the Mac App Store because its core function is saving, converting and downloading third-party media. Apple App Review Guideline 5.2.3 requires explicit authorization from sources such as YouTube, SoundCloud or Vimeo.

SAFE INSTALL STEPS

- 1

Official DMG
Avoid reuploads
- 2

Check hash
8c38a1717c6c...
- 3

Right-click Open
Gatekeeper normal

Verdict: safe to sideload from the official source. Use Musim only for content you have the right to save.
